

Date:

Wednesday Challenge Form

Group Members: Elisabeth, Jaden

Problem Statement: Create a sketchup of an A and give it to another group then build an A out of cardboard based off of a sketchup that another group made.

Approach: At first we created an A in sketchup then we got another groups A. After that we measured the sides on the sketchup and then we measured and cut the A as precisely as possible.

Solution: make it as precisely as possible

Lessons Learned: Use specific tools to make the edges and lines straight
